SKILLS

PROGRAMMING

Python · SQL · React · JavaScript

ML / AI

Scikit-learn · Random Forest · OpenCV · Content Filtering · Cosine Similarity · Gemini API

DATA TOOLS

Pandas · NumPy · Matplotlib · Seaborn · Plotly

BACKEND / DB

FastAPI · Node.js · PostgreSQL · MongoDB · Express

DEVOPS / TOOLS

Vercel · Railway · Render · Git · Next.js

INTERESTS

- Entrepreneurship & startup ecosystems
- Leadership & cross-functional teamwork
- AI product development
- Deep interest in emerging AI technologies and their impact on industries
- Actively learning new tools, technologies, and concepts to stay updated in the field of Data Science and ML

PROFILE

Results-driven aspiring Machine Learning Engineer with a strong foundation in developing production-ready ML systems, from data preprocessing and feature engineering to model deployment and API integration. Experienced in Python, Scikit-learn, and computer vision, with a focus on building scalable, real-world AI solutions. Driven to leverage data and machine learning to solve complex problems and deliver high-impact results

PROJECTS

IGNIVIS – AI-Powered Heat Stress Intelligence System

2025 – 2026

FastAPI · Scikit-learn · OpenCV · Next.js · PostgreSQL · Railway· Render · Vercel

Live Demo · GitHub

- Engineered a multi-modal AI system combining **4 independent ML models** — environmental sensors (temp, humidity, UV, wind speed), physiological inputs, and real-time facial analysis via OpenCV to generate a personalized heat stress score.
- Trained **Random Forest classifiers** using Scikit-learn, achieving **sub-2-second end-to-end prediction latency** in a live production environment.
- Deployed FastAPI + Supabase (PostgreSQL) backend on Render, optimizing the full inference pipeline to run under **512 MB cloud memory constraint**.
- Integrated **Google Gemini API** to dynamically generate AI-driven health insights and actionable alerts based on predicted stress levels.
- Shipped a fully responsive Next.js + Tailwind CSS frontend on Vercel, handling simultaneous live camera input, sensor API, and model output streams.

CineMatch – ML-Powered Movie Recommendation System

2026

Python · FastAPI · Scikit-learn · Pandas · TMDB API · Next.js · Vercel · Render

Live Demo · GitHub

- Built a **content-based filtering engine** using CountVectorizer + Cosine Similarity, processing **5,000+ movies** from a Kaggle dataset across genres, cast, keywords, and plot features.
- Delivered top-5 recommendations in **under 100 ms per query** via vectorized feature indexing — validated for high semantic relevance.
- Developed a FastAPI REST backend (Render) + Next.js frontend (Vercel) with real-time **TMDB API integration** for live posters, ratings, and movie details.
- Delivered a fully responsive UI with dynamic movie cards, enabling seamless discovery across 5,000+ titles with zero-latency interactions.

Spam Classifier – Full-Stack ML Web App

2025

Python · FastAPI · Scikit-learn · TF-IDF · SVM · Next.js · Tailwind CSS · Git

Live Demo · GitHub

- Trained a **Support Vector Machine (SVC)** classifier with TF-IDF vectorization achieving **94% accuracy** on spam detection across diverse message patterns.
- Built a FastAPI backend serving real-time predictions with **sub-100 ms API response time**; integrated with a Next.js + Tailwind CSS frontend for seamless UX.
- Implemented efficient text preprocessing pipeline using TF-IDF, enabling robust feature extraction and generalizable spam signal detection at production scale.

EXPERIENCE

Hackathon Finalist

March 2026

SDGI Global University · Ghaziabad, India

- Reached the **finalist round** competing against teams from across the region, demonstrating strong problem-solving and rapid prototyping under pressure.
- Worked effectively in a **fast-paced, time-constrained** environment, delivering a functional ML-powered solution within the hackathon timeline.
- Collaborated cross-functionally across design, development, and presentation — showcasing strong **teamwork and communication skills**.
- Demonstrated ability to **learn quickly and adapt** to new problem domains, independently driving technical decisions from ideation to demo.

EDUCATION

B.Tech — Computer Science Engineering

Aug 2024 – Aug 2028

Ajay Kumar Garg Engineering College, Ghaziabad

- Practical training at AKGEC's Centers of Excellence, collaborating with Kuka Robotics, Bosch Rexroth & National Instruments.

Intermediate — Science (PCM)

May 2023 – Jul 2024

Jaypee Vidya Mandir

- Built a strong analytical foundation in Mathematics and Science during my school years, which enhanced my problem-solving abilities and logical thinking
